

SANDEEP BHARGAV

Email sandeepbhargavmurarishetti@gmail.com

Summary:

- 2.1 years of professional experience as a Frontend Developer, with expertise in React.js and modern JavaScript-based UI development. & Next.JS.
- Hands-on experience in building responsive, interactive, and scalable web applications using React.js, HTML5, CSS3, JavaScript, Material UI, and Bootstrap
- I have hands-on experience with Next.js, using it to build fast, SEO-friendly, and scalable web applications.
- Effective communicator, agile team player, and quick learner with a strong problem-solving
- Maintains excellent work ethics, communication, and interpersonal skills.
- Demonstrates the ability to learn new technologies and tools quickly.
- Works efficiently in both team-oriented and individual environments.

Technical Skills:

Frontend	React.js, Next.js, JavaScript (ES6+), HTML5, CSS3, Bootstrap, Material UI
API Integration	Axios, Fetch API, RESTful APIs.
Tools	VS Code, Git, Postman
Others	Chrome Dev Tools, MS-Office

Professional Experience:

Organization	Designation	Duration
TResource Innovations Pvt Ltd (part of Ekipit)	Frontend Developer	July 2024 to Till Date

Project Experience:

Project 1: TeamTrakr (SaaS Based Project) Role: React Developer Tools & Technologies: React.js, TypeScript, Tailwind CSS, REST APIs,:

Project Description

TeamTrakr is a SaaS-based employee management and team collaboration platform designed for modern organizations. It provides comprehensive workforce management features—including task assignment, project summaries, attendance tracking, employee engagement tools (such as automated celebration wishes), and user management—all integrated into a unified workspace.

As a subscription-based SaaS platform, TeamTrakr offers tiered membership plans that include limits on users, storage, and advanced features like detailed analytics and performance tracking. The platform supports a multi-tenant architecture, secure authentication, role-based access control, and comprehensive admin dashboards for subscription and organizational management.

The focus of the application is to enhance team productivity, foster employee engagement, and improve workflow efficiency through an intuitive, responsive UI.

Roles and Responsibilities

Frontend Development

- Developed modern, responsive, and high-performance UI components using React.js and TypeScript.
- Built reusable UI components aligned with the application's design system (using Tailwind CSS) to ensure scalability, visual consistency, and maintainability.
- Translated UI/UX wireframes into functional and user-friendly admin dashboards, project summary cards, and attendance tracking widgets.

Feature Implementation

- Implemented real-time task updates and workspace notifications for seamless team collaboration.
- Developed team and user management screens with strict role-based access control (RBAC), including reactivation request flows.
- Integrated employee engagement features, including automated celebration/anniversary wishes and interactive notifications.
- Added user presence indicators and activity tracking across the application.

- Built subscription-based UI flows, including tier selection, payment gateway integration, and restricted-access handling for non-subscribers.

API Integration & Collaboration

- Integrated backend REST APIs ensuring correct request/response handling, data validation, and robust error management.
- Collaborated closely with the backend team to test API functionality, handle rate-limiting logic, and validate new features.
- Enhanced data flow and optimized client-side state management to handle edge cases for real-time dashboard updates.

Performance & Optimization

- Debugged complex UI issues, improved overall web vitals, optimized component re-renders, and ensured cross-browser responsiveness.
- Improved initial load times for the dashboard and optimized data-heavy table and list components for smooth scrolling.

Version Control & Agile Collaboration

- Used Git for version control, managed feature branches, raised pull requests, and actively participated in peer code reviews.
- Worked within an Agile methodology—participating in daily stand-ups, sprint planning, story point estimation, and retrospective sessions.
- Contributed to the continuous improvement of the platform's UI/UX and proposed feature enhancements based on evolving business requirements.

Project 2: TResource (part of Ekipit) – Teamrex Application (SaaS Based Project)

Role: React Developer

Tools & Technologies: React.js, Bootstrap, REST APIs, Git, Web Sockets

Company: TResource (part of Ekipit)

Project Description

Teamrex is a **SaaS-based team collaboration and communication platform** designed for modern organizations.

It provides real-time communication features—including **instant chat, video meetings, file sharing, team channels, notifications, and user management**—all integrated into a unified workspace.

As a **subscription-based SaaS platform**, Teamrex offers tiered membership plans that include limits on users, storage, and advanced features such as video conferencing and analytics. The platform supports multi-tenant architecture, secure authentication, role-based access, and admin dashboards for subscription and team management.

The focus of the application is to enhance productivity, enable seamless collaboration, and improve workflow efficiency through an intuitive, responsive UI.

Roles and Responsibilities

Frontend Development

- Developed modern, responsive, and high-performance UI components using **React.js** and **Next.js**.
- Built reusable UI components aligned with the application's design system to ensure scalability and maintainability.
- Translated UI/UX wireframes into functional and user-friendly dashboards, chat screens, and admin panels.

Feature Implementation

- Implemented real-time chat and messaging using Web Sockets for instant communication.
- Developed team/channel creation & management screens with role-based access.
- Integrated file uploading and sharing with preview and download functionality.
- Added user presence indicators (online, offline, typing status).
- Implemented push notifications and activity tracking across channels.
- Built subscription-based UI flows, including plan selection, payment UI integration, and restricted-access screens for non-subscribers.

API Integration & Collaboration

- Integrated REST APIs using Axios to ensure correct request/response handling.
- Collaborated closely with the backend team for testing API functionality, error handling, and feature validation.
- Enhanced data flow, optimized state management, and handled edge cases for real-time updates.

Performance & Optimization

- Debugged UI issues, improved performance, optimized re-renders, and fixed responsiveness issues across browsers.
- Improved chat load times and optimized media/file viewer components.

Version Control & Agile Collaboration

- Used **Git** for version control, handled feature branches, pull requests, and participated in code reviews.
- Worked in Agile methodology—daily standups, sprint planning, story estimation, and team collaboration sessions.
- Contributed to continuous improvement of UI/UX and feature enhancements based on business requirements.

Project: 3

Company : Nine Softech
Project : **Jobber (Recruitment Module) Application**
Tools : React.js, Next.js, redux toolkit, Bootstrap, Swagger, git.
Role : React Developer

Project Description:

- Jobber is a recruitment platform that helps track resumes, candidate profiles, and their application statuses in one place.
- It simplifies the hiring process by allowing recruiters to manage, update, and filter candidate information efficiently.

Roles and Responsibilities:

- Integrated **Redux Toolkit** for efficient state management across the application.
- Collaborated with backend teams to consume and test APIs using **Swagger** and ensured smooth data flow.
- Implemented features like resume upload, candidate status tracking, and profile management with real-time UI updates.
- Created reusable components and maintained a clean, modular codebase following best practices.
- Debugged and resolved UI-related issues, improving application stability and performance.
- Worked with **Git** for version control and collaborated with team members through regular code reviews and pull requests.
- Participated in Agile meetings and contributed to sprint planning and feature discussions.

Project 4: Time & Space website

Company: TResource (part of

Ekipit) **Role:** React.js Frontend

Developer **Tech Stack:** React.js,

Material UI **Project Description:**

- Developed a web platform for Time & Space, a Hyderabad Metro advertising & hoarding company.
- Showcased metro station and pillar-based ad inventory with images, videos, and details.
- Designed an interactive, responsive website to highlight outdoor branding opportunities.
- Enabled location-based browsing of ad spaces for businesses and agencies.
- Built with React.js and Material UI to ensure a modern, scalable frontend solution.

Project 5: Zenn – Catering & Online Product Ordering Website (Australia Client)

Website: Zenn (Australia)

Client: Zenn

Role: Next - js Frontend Developer

Tech Stack: Next Js, Material UI, REST APIs

Project Description:

- Developed a catering and online food/product ordering platform for an Australia-based client.
- Built user-friendly interfaces for browsing catering menus and online products.
- Implemented dynamic ordering workflows including cart management and order placement.
- Designed responsive layouts to support seamless usage across desktop, tablet, and mobile devices.
- Integrated frontend components with backend APIs for real-time product and order data.
-

Responsibilities

- Built responsive UI components in React.js with Material UI for consistency.
- Implemented ad space showcase modules (carousels, grids, location-based displays).
- Integrated APIs with frontend for dynamic ad inventory management.
- Ensured cross-browser compatibility and performance optimization.
- Collaborated with designers & backend team to deliver seamless client experience

Project 6: St Dreux – Catering & Ordering Management Platform (Australia Client)

• Website: St Dreux

Client: St Dreux

Role: Next.js Frontend Developer

Tech Stack: Next.js, Material UI, REST APIs

• Project Description:

- Developed a catering and online ordering management platform for an Australia-based client.
- Created intuitive user interfaces for browsing menus, placing orders, and managing customer interactions.
- Implemented end-to-end ordering workflows including cart handling, address management, and order tracking.
- Built responsive and scalable UI designs for seamless performance across desktop, tablet, and mobile devices.
- Integrated frontend with backend APIs to enable real-time updates for products, orders, and user data.

• Responsibilities:

- Developed reusable and responsive UI components using React.js and Material UI.
- Implemented dynamic features such as cart, order history, and address management modules.
- Integrated REST APIs for handling product data, user profiles, and order processing.
- Optimized performance and ensured cross-browser compatibility.
- Collaborated with backend developers and designers to deliver a smooth and user-friendly experience.

•

Education:

- B.Tech from **Ace Engineering college** Affiliated to Jawaharlal Nehru Technological University Hyderabad in **2022**.
